

**Amendments to the Specification:**

Please replace the paragraph (or section) beginning at page 2, line 18, with the following redlined paragraph (or section):

Thus, it is known to provide a bushing with a radial flange at one of its ends. There is a need for providing a bushing that has a radial flange at each of its ends. For example, when bushings are used in a lug or clevis, there is a potential of face-to-face contact between the joined parts. Flanges on both ends of the bushing would protect the ~~face-to-face~~ face-to-face contact of the parent material in which the bushing has been installed.
